

WHAT IS CLAIMED IS:

1. A floor cleaning implement comprising a handle, a mop head, and a universal joint connecting said handle to said mop head, wherein said mop head comprises at least one three-dimensional surface and readily receives a planar cleaning sheet that contours to the said three-dimensional surface of said mop head.
2. A floor cleaning implement as in claim 1, wherein said mop head receives said planar cleaning sheet by way of pinch points, adhesives, or fasteners.
3. A floor cleaning implement as in claim 1, wherein said planar cleaning sheet is one or more layers consisting of the group of wovens, nonwovens, films, and the combinations thereof.
4. A floor cleaning implement as in claim 1, wherein said planar cleaning sheet is wet or dry.
5. A floor cleaning implement as in claim 1, wherein said planar cleaning sheet comprises an aqueous or non-aqueous cleaning composition.
6. A floor cleaning implement comprising a handle, a mop head, and a universal joint connecting said handle to said mop head, wherein said mop head comprises a first surface comprising a first three-dimensional surface and a second surface comprising a second three-dimensional surface, wherein said first and second surfaces readily receives a planar cleaning sheet that contours to the said three-dimensional surface of said mop head.
7. A floor cleaning implement that acts as an adapter for a mop head comprising a support surface, wherein said adapter comprises a three-dimensional surface and is fastened to said support surface so as to convert said mop head into a mop head with a three-dimensional surface; said three-dimensional surface readily receives a planar cleaning sheet that contours to the said three-dimensional surface of said mop head.
8. A floor cleaning implement as in claim 7, wherein said adapter fastens to said support surface by way of clips, clamps, or hooks.
